# GARAGE TOOLS

## • Use

1. Adopting the deep groove ball bearing of load chain sprocket , pulling is smaller. Equipped with needle bearing for supporting driving shaft it to increase the mechanical advantage.
2. Adopting double pawl brake system and double chain guide roller system, operation is more safe and stable
3. Double-pawl brake system designed for enhanced strength, forget upper, lower hooks with forged steel safety latches, high tensile alloy steel chain.
4. Free-wheeling mechanism for quick chain adjustments.
5. 360 rotating handle of ease of use in confined space.
6. Idling mechanism to allow fast adjustment of load chain.
